

Project X App – Installation and Configuration Guide

Document Overview

Document Title: Project X App – Installation and Configuration Guide

Author: Priyadharshini N S

Last Updated: November 2025

Version: 1.0

Purpose: This guide provides step-by-step instructions to install, configure, and verify the Project X App on supported systems.

Intended Audience: End users, testers, and IT administrators responsible for deploying Project X App.

1. Introduction

The **Project X App** is a lightweight task automation tool that simplifies workflow management. This document describes the procedures to install and configure the application on Windows and macOS platforms. It also includes troubleshooting information and support details.

2. System Requirements

Hardware Requirements

- Minimum 4 GB RAM
- 500 MB of free disk space
- Dual-core processor or higher

Software Requirements

- **Operating System:** Windows 10 or later / macOS 12 or later
- **Dependencies:**

- Node.js v16 or later
 - Git (latest version)
 - Python 3.8+ (optional, for advanced users)
 - Internet access for activation and updates
-

3. Installation Procedure

Step 1: Download the Installer

1. Navigate to the official Project X App Download Page.
2. Select the appropriate installer for your operating system.
3. Save the installer file to your local drive.

Step 2: Run the Installer

For Windows

1. Double-click the `ProjectX_Setup.exe` file.
2. Follow the installation wizard prompts.
3. Accept the license agreement.
4. Choose the installation location and click **Install**.
5. Click **Finish** when installation completes.

For macOS

1. Open the `ProjectX.dmg` file.
2. Drag the **Project X** icon into the *Applications* folder.
3. Launch the application from *Applications*.

Step 3: Verify Installation

1. Open the terminal or command prompt.
 2. Type the following command:
`projectx --version`
 3. Verify that the version number appears.
-

4. Configuration Procedure

Step 1: Initial Setup

1. Open the **Project X App**.
2. Log in with your registered email address.
3. Go to **Settings** → **Configuration**.
4. Enter the API key from your Project X account.
5. Click **Save** to apply the configuration.

Step 2: Configure Environment Variables (Optional)

For advanced configuration, set environment variables as shown below:

```
PROJECTX_ENV=production  
PROJECTX_PATH=/usr/local/projectx
```

Step 3: Integration Settings

1. Navigate to **Integrations** → **Connect**.
 2. Select the required integrations (e.g., Slack, GitHub, Jira).
 3. Grant authorization when prompted.
-

5. Troubleshooting

| Issue | Possible Cause | Resolution |
|-------|----------------|------------|
|-------|----------------|------------|

| | | |
|---------------------------|-----------------------|---|
| Application does not open | Missing dependency | Reinstall Node.js and restart the system. |
| Login failure | Incorrect credentials | Reset your password from the login page. |
| API not responding | Invalid API key | Regenerate the API key from your dashboard. |

6. Uninstallation Procedure

For Windows

1. Go to *Control Panel* → *Programs* → *Uninstall a program*.
2. Select **Project X App** and click **Uninstall**.

For macOS

1. Open the *Applications* folder.
 2. Drag the **Project X App** to the *Trash*.
-
